- Free up IR resources to identify DQG PDQDJH WKH RI messages that are either spam or legitimate email
- See clusters or groups of messages based on patterns that can help you identify a widespread phishing attack against your organization
- Meet critical SLAs within your organization to process and prioritize threats and legitimate emails
- Automated email response templates let you quickly communicate back to your employees about the emails they need in order to continue working
- < R X F D Q F U H D W H F X V W R P Z R U N 5 R Z V for tasks such as prioritization and alerting so that the IR team can focus on the right messages

Identify and respond to email threats faster with PhishER

Because phishing remains the most widely used cyber attack vector, most end users report a lot of email messages they "think" could be potentially malicious to your incident response team. Whether or not you step employees through security awareness training doesn't change the fact that your users are likely already reporting potentially dangerous emails in some fashion within your organization. 7 KH LQFUHDVH RI WKLV HPDLO WUD]F FDQ SUH
